The global Nickel Plated Steel Strips for Battery market size is predicted to grow from US\$ 640 million in 2025 to US\$ 2584 million in 2032; it is expected to grow at a CAGR of 22.5% from 2026 to 2032.

Nickel-plated steel strips for batteries are steel strips coated with a thin layer of nickel, specifically designed for use in battery manufacturing, especially for lithium-ion batteries. The nickel coating enhances the corrosion resistance, electrical conductivity, and overall performance of the steel strips in electrochemical applications, such as battery electrodes.

The increasing demand for rechargeable batteries, particularly for electric vehicles (EVs), consumer electronics, and renewable energy storage, is driving the need for high-performance battery components, including nickel-plated steel strips. Nickel is critical in enhancing the battery's lifespan and performance, which fuels its growing use in both anode and cathode current collectors.

The rapid growth of electric vehicle markets presents a significant opportunity for nickel-plated steel strips, as EV batteries require highly efficient and durable current collectors. Additionally, the demand for energy storage systems (ESS) in renewable energy applications is also increasing, boosting the market for such battery components.

The main challenges include the volatility of nickel prices, which can affect production costs. Furthermore, the high cost of nickel plating and the need for advanced manufacturing techniques may limit market accessibility for small-scale producers. Additionally, the global shortage of raw materials like nickel could pose a long-term risk.
