The global Nickel Reforming Catalyst market size is predicted to grow from US$ 275 million in 2025 to US$ 344 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

In 2024, global Nickel Reforming Catalyst production reached approximately 3145 tons?with an average global market price of around US$ 85 per kg.Nickel reforming catalysts are specialized catalytic materials primarily composed of nickel supported on high-surface-area carriers such as alumina, magnesium aluminate spinel, or other refractory oxides. They are widely used in steam reforming, autothermal reforming, and partial oxidation processes to convert hydrocarbons (such as natural gas, naphtha, or biogas) into synthesis gas (syngas), a mixture of hydrogen and carbon monoxide. Nickel is chosen for its strong activity in C–H bond activation, high availability, and relatively low cost compared to noble metal catalysts. Modern formulations often include promoters and stabilizers to enhance resistance to sintering, carbon deposition (coking), and sulfur poisoning, thereby improving catalyst lifetime and performance under high-temperature and high-pressure operating conditions.

United States market for Nickel Reforming Catalyst is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nickel Reforming Catalyst is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
