Oral products originated in Sweden hundreds of years ago. They were originally tobacco powder inhaled through the nose, that is, in the form of snuff, and later gradually evolved into the current form of lip products. After generations of trials and improvements, the method of making oral products has been relatively fixed: mix tobacco, sodium carbonate and water into powder, add bergamot oil, rose oil, licorice and various spices, and then sterilize them at high temperature before they can be eaten. Nicotine pouches were introduced as a development of Swedish snus (a formula of nicotine and other spices). Like snus, consumers put the nicotine pouch under their upper lip-but this formula does not contain tobacco and comes in a pouch form, which is less messy to use and more conducive to oral hygiene. Nicotine pouches now include a variety of formulations, many of which go beyond the scope of traditional snus. Caffeine pouches (also known as energy pouches) go a step further-they are not only free of tobacco, but also nicotine. They offer other flavors and often use substances such as ginseng, guarana and tea to provide caffeine.
