The global Nicotine Salts market size is predicted to grow from US\$ 1436 million in 2025 to US\$ 2794 million in 2032; it is expected to grow at a CAGR of 10.2% from 2026 to 2032.

Nicotine salts are salts formed from nicotine and an acid. They are found naturally in tobacco leaves. Various acids can be used, leading to different conjugate bases paired with the ammonium form of nicotine.

To gauge change in nicotine levels, researchers examined e-cigarette retail sales data from January 2017-March 2022 in brick-and-mortar retailers across the continental U.S. Sales of e-cigarettes with greater than 5% nicotine have grown drastically in the past five years, increasing from 5% in 2017 to 81% in 2022. The unit share sales of high nicotine products increased by nearly 15 times and dollar share sales increased by over 13 times between 2017 and 2022.
