The NIR-II imaging system is an imaging system that applies near-infrared two zone fluorescence imaging technology. Near infrared two zone fluorescence imaging technology is a deep and high-resolution optical live imaging technique. Compared with the visible light (360-760 nm) and near-infrared region 1 (760-900 nm) windows, the tissue light absorption in the near-infrared region 2 (900-1880 nm, NIR-II) window is significantly improved, which significantly suppresses the scattering background in two-dimensional array imaging and improves the imaging effect.

The global NIR-II Imaging System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
