Nitinol Compression Staples are medical devices made from Nitinol, a nickel-titanium alloy known for its shape memory and superelastic properties. These staples are designed to provide stable fixation in bone surgery, especially for small bones such as in the foot or hand. When inserted, the staple exerts constant compressive force across a fracture or osteotomy site, promoting faster healing by maintaining bone alignment. Nitinol's ability to return to its pre-set shape upon implantation enhances the staple's functionality, making it a preferred choice in orthopedic and podiatric procedures.
