Nitro-infused tea is a type of tea that has been infused with nitrogen gas, similar to the popular nitro cold brew coffee. Nitrogen infusion involves adding nitrogen gas to the liquid under pressure, resulting in a creamy and smooth texture with a foamy top layer.

The proce

ss of infusing tea with nitrogen gas involves brewing the tea and then chilling it. After chilling, the tea is transferred to a keg or container, where nitrogen gas is added under high pressure. The gas dissolves into the tea, creating tiny nitrogen bubbles. When the

tea is poured, these bubbles give the drink a velvety texture and a visually appealing cascading effect.

The nitrogen infusion not only affects the texture but also enhances the flavor of the tea. It can impart a slightly sweeter taste and a creamy mouthfeel. The nitrogen bubbles also help to mellow out any astringency or bitterness that might be present in the tea.
