The global Nitrogen Atomized Powders market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Nitrogen Atomized Powders are metal or alloy powders produced using nitrogen as the atomizing gas. In nitrogen atomization, a high-pressure nitrogen jet breaks down the molten metal stream into uniform, dense particles, which are typically spherical or irregular in shape. As nitrogen is inert, it prevents oxidation during the atomization process, resulting in high-purity powders with low oxygen content. Nitrogen atomized powders are widely used in powder metallurgy, additive manufacturing, and thermal spray applications, with common materials including stainless steel, copper, and nickel-based alloys.

United States market for Nitrogen Atomized Powders is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Nitrogen Atomized Powders is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
