The research report highlights the growth potential of the global Nitrogen Fertilizers market. Nitrogen Fertilizers are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Nitrogen Fertilizers. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Nitrogen Fertilizers market.

Nitrogen is an important nutrient for all crops in growth and development. Despite of abundance of nitrogen in the environment, only a few plants have the capability to absorb and use the same. Nitrogen provides better texture and color to plants and helps in faster growth which in turn increases the overall agricultural productivity. Nitrogenous fertilizers are inorganic in nature and are mostly used in the agriculture industry. It contains nitrous compounds such as ammonium sulfate, ammonium nitrate, calcium ammonium nitrate and other compounds in small proportions. Fertility of soil determines the concentration of nitrogenous fertilizers which is calculated by soil tests depending on the type of crop.

According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added

value. According to data, North America was the region with the most fertilizer use in the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our "Agriculture Research Center", the global fertilizer consumption was nearly 200 million tons in 2022. According to the National Bureau of Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.
