The global Nitrogen Fixing Fertilizer market size is predicted to grow from US\$ 1622 million in 2025 to US\$ 2710 million in 2031; it is expected to grow at a CAGR of 8.9% from 2025 to 2031.

Nitrogen-fixing fertilizer is a fertilizer containing fixed nitrogen elements that can be absorbed and utilized by plants. According to its chemical composition and properties, it is mainly divided into ammonium nitrogen fertilizer, nitrate nitrogen fertilizer and amide nitrogen fertilizer. Nitrogen-fixing fertilizer should be used in combination with other fertilizers such as phosphorus and potassium to meet the needs of crops for various nutrients. For example, when growing rice, a reasonable ratio of nitrogen, phosphorus and potassium can increase the yield and quality of rice. At the same time, when used in combination with organic fertilizers, it can improve soil structure, increase soil fertilizer retention capacity, and further improve the utilization rate of nitrogen fertilizer.

With the global population growth and the increase in demand for food, the demand for nitrogen-fixing fertilizers in agricultural production continues to grow steadily. In developing countries, the process of agricultural modernization is accelerating, and there is a high degree of dependence on nitrogen-fixing fertilizers to improve crop yields and quality. Different crops have different demands for nitrogen fertilizers and different types of demand. For example, leafy vegetables have a relatively large demand for nitrogen fertilizers, while leguminous crops have relatively less demand for nitrogen fertilizers due to their own nitrogen-fixing ability. This has also prompted the continuous segmentation of the nitrogen-fixing fertilizer market to meet the planting needs of different crops. The development of precision agriculture has put forward more precise requirements for the application of nitrogen-fixing fertilizers, prompting companies to develop and promote products and technologies that are more suitable for precision

fertilization, such as slow-release fertilizers, controlled-release fertilizers, etc., to improve fertilizer utilization and reduce waste and environmental pollution.
