Nitrogen-infused drinks are beverages that have been infused with nitrogen gas. This infusion process creates a unique texture and sensory experience, characterized by a smooth, creamy mouthfeel and a cascading, frothy head when poured. The nitrogen gas forms tiny bubbles that are much smaller than those produced by carbon dioxide, resulting in a silky and less fizzy drink. These drinks can include a variety of beverages such as coffee (nitro cold brew), tea, beer (nitro stout), and even some soft drinks. The nitrogen infusion enhances the flavor profile and visual appeal, making these drinks popular among consumers looking for a distinctive and enjoyable drinking experience.

The global Nitrogen-Infused Drinks market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
