Nitrogen-Protected UVLED Debonding Machine is a device that uses UVLEDs to emit specific wavelengths of ultraviolet light for decapping treatment in a nitrogen-protected environment. It consists of a nitrogen protection system, UVLED lamp array, microcomputer control system, and air-cooled heat dissipation components. The nitrogen filling can isolate the air, prevent oxygen and water vapor from interfering with the decapping process, and improve the efficiency and quality of decapping. This equipment is widely used in the semiconductor, optical lens, LED chip and other industries, and is suitable for decapping of materials such as wafers and glass.
