The global Nitrogen Purging System market size is predicted to grow from US\$ 338 million in 2025 to US\$ 411 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Nitrogen purging is an air-cleansing method used to ensure that no trace of harmful contaminants or gases is left in the atmosphere. The ultimate goal here is to re-stabilize the environment to prevent an explosion.

That is why the industrial use of nitrogen in the oil and gas industry is so common. When aiming to purge pipelines, for instance, dry nitrogen gas can be run through the lines to eliminate any remaining water. In addition, the nitrogen prepares pipelines or vessels that will later be exposed to flammable or explosive gases.

Global Nitrogen Purging System main players are Praxair Technology, Air Products and Chemicals, IKM Testing, Linde, Schlumberger, Airgas, etc. Global top five manufacturers hold a share over 40%. North America is the largest market, with a share nearly 30%.
