The global Nitrogen Trifluoride for Integrated Circuits market size is predicted to grow from US\$ 961 million in 2025 to US\$ 1699 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

Nitrogen trifluoride is an excellent plasma etching gas and cleaning agent in the microelectronics industry. Mix raw materials such as hydrogen fluoride and ammonium hydrogen fluoride to form a molten electrolyte, which is then electrolyzed in an electrolytic cell. The main product, nitrogen trifluoride, is collected in a cold trap. Impurities are removed through distillation, and the distilled product is collected and tested in a quality tank before being filled. Nitrogen trifluoride can strongly irritate the eyes, skin, and respiratory mucosa, corrode tissues, and react strongly with reducing agents, causing explosions. There are strict standards for storage and transportation, and packaging containers such as steel cylinders and bundle containers need to be used to supply to customers.
