The global Nitrogenous Ferromanganese market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Ferro Manganese Nitride is an essential alloying agent for the production of special alloy steels, stainless steels and heat-resistant steels, and is usually obtained by nitriding medium and low carbon ferromanganese. Ferromanganese nitride is mainly used as an additive of nitrogen in steelmaking production, which can improve the mechanical properties of steel such as strength, grain refinement and austenite stabilization. Ferromanganese nitride has high content of main elements, low content of phosphorus and other hazardous impurities, high utilization rate of nitrogen after joining the melt, and low addition amount.
