NMHC Continuous Monitoring System is a device for real - time, continuous air - quality monitoring. It samples ambient air, separating and measuring non - methane hydrocarbons. Comprising a sampling unit, an analysis part (usually using gas chromatography), and a data - handling section, it functions as follows: the sampling unit collects air samples, which are then analyzed to determine NMHC concentrations. The data - handling component processes and stores these results, and can transmit them in real - time to a monitoring center. This system is vital for environmental surveillance, industrial emission control, and ensuring regulatory compliance, enabling continuous tracking of NMHC levels.
