NMR deuterated solvent is a special solvent used in nuclear magnetic resonance (NMR) experiments. Its main feature is that the hydrogen atoms in the molecule are replaced by deuterium atoms, thereby reducing the interference of the hydrogen signal in the solvent on the sample signal and improving the resolution and accuracy of NMR experiments. This solvent is commonly used for NMR analysis of hydrogen-containing compounds, such as organic compounds, to obtain information on their structure and physical properties.

The global NMR Deuterated Solvent market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
