## Abstracts

The global No-code App Builder market size is predicted to grow from US\$ 7912 million in 2025 to US\$ 27164 million in 2032; it is expected to grow at a CAGR of 19.3% from 2026 to 2032.

No-code App Builder market refers to software platforms that enable users to design, build, deploy, and manage applications without writing traditional programming code. These platforms rely on visual interfaces, drag-and-drop components, configuration rules, and pre-built logic modules to abstract software development complexity. No-code App Builders are widely adopted for web applications, mobile apps, internal business tools, and workflow automation, allowing non-technical users and business teams to rapidly create functional applications.

The No-code App Builder market generally exhibits high gross margins, typically ranging from 70% to 90%, due to its SaaS-based delivery model and strong economies of scale. Key cost components include cloud infrastructure, platform R&D, customer support, and sales and marketing. Vendors with optimized cloud usage, standardized components, and enterprise subscription pricing structures tend to achieve higher and more stable gross margins over time.

Key growth drivers include enterprise digitalization, persistent developer shortages, rising demand for rapid application deployment, and increasing acceptance of citizen development. Competitive differentiation is increasingly driven by platform extensibility, integration ecosystems, governance and security features, and AI-assisted building capabilities. Over the medium term, the No-code App Builder market is expected to expand steadily, with AI-enhanced no-code platforms gradually reshaping how applications are developed across industries.
