NO2 Converter refers to a device that is used to convert nitrogen dioxide (NO2) gas into other less harmful gases. NO2 is a harmful gas that is produced by vehicles and industrial processes, and it can cause respiratory problems and other health issues.

NO2 converters are typically used in catalytic converters, which are devices that are installed in the exhaust systems of vehicles to reduce the emissions of harmful gases. The catalytic converter contains a catalyst, usually made of platinum, palladium, or rhodium, which causes a chemical reaction that converts NO2 into nitrogen gas (N2) and oxygen gas (O2).

In addition to catalytic converters, NO<sub>2</sub> converters can also be used in industrial processes to reduce emissions of NO<sub>2</sub>. These converters work in a similar way to catalytic converters, by using a catalyst to convert NO<sub>2</sub> into other gases.
