Noise detection refers to the use of a sound level meter (also known as a sound pressure level meter) to measure the intensity of sound in an environment and its frequency distribution. Sound level meters can express the intensity of sound in decibels (dB), which helps to assess the noise level in an environment, such as industrial equipment, transportation, or urban life. They are designed to take into account the human ear's perception of different frequencies in order to accurately reflect the potential impact of noise on humans.

The global Noise Detection Sound Level Meter market size is projected to grow from US$ 94 million in 2024 to US$ 127 million in 2030; it is expected to grow at a CAGR of 5.1% from 2024 to 2030.
