The global Non-absorbable Ligature Clamp market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The non-absorbable ligature clamp is a medical device used in surgical procedures to secure and occlude blood vessels or tissues during surgery. It is designed to provide a firm grip on the tissue or vessel without causing damage or slippage. Unlike absorbable ligature materials that gradually dissolve and get absorbed by the body over time, non-absorbable ligature clamps are made of materials like stainless steel, titanium, or polymer, ensuring long-term stability and strength. These clamps are sterile, reusable, and available in various sizes and designs to suit different surgical applications, enhancing surgical precision and safety.

The industry trend for non-absorbable ligature clamps is experiencing growth due to the expanding demand for advanced surgical instruments and procedures. As surgical techniques evolve and become more sophisticated, there is an increasing need for reliable and durable surgical tools, including non-absorbable ligature clamps. Surgeons and healthcare professionals are increasingly adopting these clamps as they offer enhanced control and secure ligation during surgical interventions. There is also a focus on developing newer designs and materials that provide better ergonomics, ease of use, and improved patient outcomes. With the continual advancements in surgical technologies and procedures, the demand for non-absorbable ligature clamps is expected to rise in the healthcare industry.
