The global Non-Adhesive Liquid Embolic Agents market size is predicted to grow from US\$ 149 million in 2025 to US\$ 252 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

Non-adhesive liquid embolic agents are a type of medical substance used in interventional procedures, particularly in endovascular embolization treatments, to block blood vessels. Unlike traditional adhesive embolic agents, which rely on chemical bonding to vessel walls, non-adhesive liquid embolics do not adhere to tissue but instead occlude blood flow by physically plugging the vessel lumen. These agents are typically delivered through a catheter and are designed to solidify or gel after being injected, forming a stable mass that prevents further blood flow. They are often used for treating conditions like arteriovenous malformations (AVMs), tumors, or aneurysms, where precise occlusion of abnormal blood vessels is required.

United States market for Non-Adhesive Liquid Embolic Agents is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
