The global Non-Asbestos Fibre Jointing Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Non-asbestos fibre jointing material is a modern gasket material designed as a safer alternative to traditional asbestos-based products. It is composed of a mixture of synthetic fibres, organic fibres, fillers, and rubber binders such as nitrile, EPDM, or neoprene, which are compressed to form dense sheets. These materials provide excellent sealing capabilities, along with resistance to heat, pressure, chemicals, and oils, making them suitable for use in various industrial applications. Non-asbestos fibre jointing materials are commonly used in the automotive, petrochemical, power generation, and marine industries for creating gaskets and seals in machinery, pipes, and flanges. The shift to non-asbestos alternatives came about due to the health hazards associated with asbestos, which can cause serious respiratory illnesses when inhaled. Non-asbestos materials offer a similar performance to compressed asbestos fibre (CAF) but without the risks to human health and the environment. These materials can be tailored to meet specific application requirements, such as high temperature and chemical resistance, and have become the industry standard for sealing and jointing in critical environments. Their versatility and safety make non-asbestos fibre jointing materials a preferred choice across many sectors.

United States market for Non-Asbestos Fibre Jointing Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
