A non-contact diameter gauge, also known as a non-contact diameter measuring device, is an instrument designed to measure the diameter of cylindrical or round objects without physical contact with the object being measured. These gauges utilize various non-contact measurement techniques, such as laser, optical, or electromagnetic methods, to achieve accurate and precise diameter measurements.

Non-contact diameter gauges measure the diameter of objects without physically touching them, ensuring that the measurements are non-intrusive and do not affect the object's surface. These gauges provide high accuracy and precision in diameter measurements, crucial for maintaining quality control in manufacturing and production processes. These gauges are ideal for contactless inspection, quality control, and

process optimization in industries where accurate diameter measurements are critical.
