Non-contact mmWave Radar for medical applications is a cutting-edge technology that utilizes millimeter-wave (mmWave) electromagnetic signals to monitor vital signs and detect medical conditions without physical contact. This radar system can measure heart rate, respiratory rate, body temperature, and even detect subtle movements associated with conditions like tremors or spasms. By emitting high-frequency radio waves, mmWave radar can capture data from a distance, through clothing or bedcovers, making it ideal for continuous, non-invasive monitoring in hospitals, clinics, or at home. It is particularly useful for monitoring patients who are bedridden or unable to wear traditional sensors. The technology offers real-time insights, improves patient care, reduces the risk of infections, and enhances comfort by eliminating the need for physical sensors or wires.
