The global Non-Contact Optical Shaft Gage market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Non-Contact Optical Shaft Gage is a precision measurement device that utilizes optical technology to measure the diameter, length, or other dimensional characteristics of a shaft without making physical contact with the surface of the shaft. This type of gage typically employs laser or other light-based sensing mechanisms to capture accurate measurements, eliminating the potential for wear or damage to the shaft surface that can occur with contact-based measurement tools. Non-contact optical shaft gages are often used in applications requiring high accuracy and repeatability, such as in the manufacturing and inspection of precision machinery components.
