The global Non-Contact Spectrophotometer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Non-contact spectrophotometers are the instruments used to conduct non-contact spectrophotometry processes. As the name suggests, these devices measure color without making contact with the samples. Non-contact spectrophotometry combines spectrophotometry with color imaging procedures to characterize highly complex materials. Like standard spectrophotometry, non-contact spectrophotometry facilitates the quantitative measurement of light absorption over a range of wavelengths to measure the color of a sample. However, this particular technique accomplishes this task without touching the sample surface, facilitating irregular sample measurement with greater accuracy and efficiency.

United States market for Non-Contact Spectrophotometer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
