Urethane wheels with flexible spokes are a valuable aid in preventing caliper loss caused by crush in combined board. They are usually known as “No-Crush” or “Zero-Crush” wheels. They are used on the corrugator in several places.

With the increasing adoption of automation in industries, the demand for non-crush wheels has grown. These wheels are commonly used in material handling systems, conveyor belts, and automated machinery to facilitate smooth and efficient movement while avoiding damage to fragile or sensitive materials. The rapid growth of e-commerce has resulted in increased demand for efficient and reliable material handling systems in warehouses and distribution centers. Non-crush wheels are essential components of conveyor systems used in these facilities to move packages and goods without causing damage. Non-crush wheels are specifically designed to support and protect delicate or fragile materials during transportation or in manufacturing processes. Industries such as

electronics, automotive, and pharmaceuticals prioritize product protection and use non-crush wheels to ensure the integrity of their goods. Industries often have quality control standards and compliance requirements for handling materials properly. Non-crush wheels play a role in meeting these standards by preventing product damage and ensuring consistent material handling practices.
