The global Non Evaporable Getter Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Non-evaporable getter (NEG) materials are specialized substances used to maintain a vacuum by removing trace gases and contaminants from the environment. These materials, typically composed of alloys such as titanium-zirconium-vanadium (Ti-Zr-V), are activated at high temperatures and then function at lower temperatures to absorb residual gases through a chemical reaction. Unlike other getters that rely on evaporation, NEG materials do not require regular replacement or reactivation, making them highly effective and long-lasting for vacuum systems. They are widely used in applications such as particle accelerators, vacuum tubes, and space technology, where maintaining a high-quality vacuum is crucial for optimal performance and longevity.

United States market for Non Evaporable Getter Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Non Evaporable Getter Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Non Evaporable Getter Materials is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
