## Abstracts

The global Non Evaporable Getters (NEG) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Non-Evaporable Getters (NEGs) are materials used to maintain a vacuum in various applications by chemically reacting with residual gases. Unlike traditional getters that require heating to release and react with gas molecules, NEGs operate at room temperature. They are typically composed of reactive metals such as zirconium, titanium, or alloys that have a high affinity for gases like hydrogen, oxygen, and water vapor. NEGs work by chemically binding these gases to their surface, thus reducing their partial pressure and maintaining a clean vacuum environment. They are commonly used in vacuum systems for scientific instruments, semiconductor manufacturing, and space applications due to their reliability, low power consumption, and long-lasting performance.

United States market for Non Evaporable Getters (NEG) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
