Non-explosion-proof audio and visual alarms are sound and light alarm devices that usually has one or more built-in sound generators (such as buzzers) and high-intensity light bulbs or LED lights. When the control circuit receives the alarm signal, it will generate enough voltage and current to vibrate the metal piece and make a sound, and make the light bulb or LED emit a strong flash. When an alarm event occurs, it can send out both sound and light alarm signals at the same time to remind on-site personnel to pay attention.

The global Non-explosion-proof Audible and Visual Alarm market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
