The global Non-ferrous Metal Cold Heading Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A non-ferrous metal cold heading machine is used in the manufacturing process to form non-ferrous metal materials into specific shapes, typically fasteners like bolts, screws, and rivets. Unlike ferrous metals (which contain iron), non-ferrous metals do not contain significant amounts of iron and are often more resistant to corrosion. Cold heading machines work by forcing the metal through a die to create the desired shape without heating the material excessively. This process is crucial for producing precise components used in various industries, including automotive, aerospace, and construction.
