Non-fused Switch Disconnectors are an electrical safety device designed to power down and isolate a part of an electrical circuit prior to it being serviced or maintained. Non-fused switch disconnectors use a knife-blade or rotary disconnect to break a circuit as opposed to fused versions, meaning they can be reset easily without the need to replace a fuse. Rotary non-fused switch disconnectors open the circuit by rotation of a lever, while knife-blade switch disconnectors use a hinge to lift a lever off its slot and break the circuit.

Global Non-Fused Switch Disconnecter key players include ABB, Eaton, Schneider Electric, Siemens, Rockwell Automation, etc. Global top five manufacturers hold a share about 30%.

Europe is the largest market, with a share about 30%, followed by China, and North America, both have a share over 50 percent.

In terms of product, Rotary is the largest segment, with a share nearly 70%. And in terms of application, the largest application is Industrial, followed by Commercial, and Residential.
