The global Non GMO Seed market size is predicted to grow from US\$ 50.33 million in 2025 to US\$ 65.64 million in 2032; it is expected to grow at a CAGR of 3.9% from 2026 to 2032.

The non-GMO seed market trend is experiencing significant growth due to increasing consumer demand for healthier and more sustainable food options. Non-GMO seeds are those that have not been genetically modified through artificial methods, and they are becoming increasingly popular among consumers who are concerned about the potential health and environmental impacts of genetically modified organisms (GMOs). One of the key drivers for this market trend is the growing awareness and concern about the potential risks associated with GMOs. Consumers are becoming more educated about the potential health and environmental impacts of GMOs and are actively seeking out non-GMO options. This has led to an increased demand for non-GMO seeds across various agricultural sectors, including fruits, vegetables, grains, and oilseeds.
