The global Non-Gravity Sewage Collection Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Non-Gravity Sewage Collection Systems usually refers to a sewage collection system that does not rely on gravity, mainly including Vacuum Sewage Collection Systems and Pressure Sewage Collection Systems.

Vacuum Sewage Collection Systems use gas pressure differences to drive sewage flow by creating a vacuum inside the pipes. Such systems typically include vacuum pumping stations and vacuum pipe networks that collect and transport sewage by creating negative pressure in sewage pipes. Vacuum systems are particularly useful in areas with complex or low-lying terrain and in scenarios that require temporary deployment.

Pressure Sewage Collection Systems use pressure pumps to push sewage from low points or collection points to treatment stations or treatment facilities. Such systems typically include pressure pumping stations and a network of pipes that convey sewage through hydraulic pressure. Pressure systems are suitable for scenarios that require long-distance transportation or processing of large amounts of sewage.

United States market for Non-Gravity Sewage Collection Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
