Non-illuminated push button switches are fundamental manual control components characterized by their simplified construction and enhanced reliability, omitting integrated light indicators. Typically housed in thermoplastic resins (e.g., PBT/nylon) or metal casings, they utilize silver-alloy or gold-plated contacts for stable conductivity, with mechanical durability exceeding 500,000 actuations. Key features include flat or slightly convex anti-misoperation surfaces, tactile feedback (audible clicks or distinct travel), and IP65-rated environmental protection (industrial variants). Designed for applications requiring no visual status confirmation, such as industrial emergency stops, appliance controls, and low-power circuits, they outperform illuminated counterparts in power efficiency, resistance to oils/UV exposure, and wider temperature tolerance.
