The global Non-Insulated Blade Terminal market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Non-Insulated Blade Terminal is an electrical connector designed to connect a wire to a screw or terminal block without any insulation protection. The terminal features a flat, blade-shaped metal component, typically made of copper, brass, or steel, that provides a secure electrical connection. These terminals are widely used in environments where insulation is either provided externally (like inside an electrical enclosure) or is unnecessary due to the specific application requirements. While non-insulated blade terminals provide an efficient and durable connection, they are not suitable for environments where exposed metal poses a risk of short circuits or electrical shock, making them best for controlled settings.

United States market for Non-Insulated Blade Terminal is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
