A non-invasive ventilation nasal mask is designed to cover only the nose, providing respiratory support through the nasal passages. This type of mask is often used for patients who require non-invasive ventilation but prefer a less obtrusive option than an oronasal mask. Nasal masks are commonly utilized in the treatment of sleep apnea and other respiratory conditions that can be managed with nasal airflow. The mask is connected to a ventilator that supplies a controlled flow of air to maintain open airways and support the patient's breathing.
