A non-invasive ventilation oronasal mask is a type of respiratory mask that covers both the nose and mouth, providing an effective seal to facilitate the delivery of positive airway pressure from a ventilator. This mask is commonly used for patients requiring continuous or bi-level positive airway pressure (CPAP or BiPAP) therapy to manage conditions such as sleep apnea, chronic obstructive pulmonary disease (COPD), and acute respiratory failure. The oronasal design ensures that the patient receives adequate ventilation even if they breathe through their mouth.
