The global Non-Latching Power Relay market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Non-latching relays have only one stable position - the 'off' or de-energized position. They will remain in this unpowered state, not receiving power. Most power relays are monostable relays with a neutral coil system. When electricity passes through the coil circuit, the relay switches to the energized position. An internal coil creates a magnetic force that holds the energized position. When power is turned off, the relay returns to the de-energized position.
