However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Non Lethal Weapons. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Non Lethal Weapons market.

Non-lethal weapons, also called less-lethal weapons, less-than-lethal weapons, non-deadly weapons, compliance weapons, or pain-inducing weapons are weapons intended to be less likely to kill a living target than conventional weaponssuch as knives and firearms. It is often understood that unintended or incidental casualties are risked wherever force is applied, but non-lethal weapons try to minimise the risk as much as possible. Non-lethal weapons are used in policing and combat situations to limit the escalation of conflict where employment of lethal force is prohibited or undesirable, where rules of engagement require minimum casualties, or where policy restricts the use of conventional force.

Non-lethal weapons may be used by conventional military in a range of missions across the force continuum. They may also be used by military police, by United Nations forces, and by occupation forces for peacekeeping and stability operations. Non-lethal

weapons may also be used to channelize a battlefield, control the movement of civilian populations, or to limit civilian access to restricted areas. When used by police forces domestically, similar weapons, tactics, techniques and procedures are often called 'less lethal' or 'less than lethal' and are employed in riot control, prisoner control, crowd control, refugee control, and self-defense.
