Non-LVP parenterals products referred to the small volume parenteral except biologicals. Small volume parenteral solutions are usually 100 ml or less and are packaged in different ways depending on the intended use. If the SVP is a liquid that is used primarily to deliver medications, it is packaged in a small plastic bag called a minibag of 50 - 100 ml (minibags look like small plastic LVP bags). SVPs can also be packaged as ampules, vials, and prefilled syringes. Liquid drugs are supplied in prefilled syringes, heat-sealed ampules, or in vials sealed with a rubber closure. Powdered drugs are supplied in vials and must be constituted (dissolved in a suitable liquid) before being added to any solution. SVPs packaged as ampules, vials, or prefilled syringes are typically added to a minibag or a LVP but they may also serve as the final container. The term admixture is used to denote a solution where such an additive has been

added to a minibag or LVP.
