According to our LPI (LP Information) latest study, the global Non-magnetic Stainless Steel market size was valued at US\$ million in 2023. With growing demand in downstream market, the Non-magnetic Stainless Steel is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Non-magnetic Stainless Steel market. Non-magnetic Stainless Steel are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Non-magnetic Stainless Steel. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Non-magnetic Stainless Steel market.

Austenitic stainless steels have a high amount of austenite which makes them mostly non-magnetic. Even though grades such as 304 and 316 stainless steel have high amounts of iron in their chemical composition, austenite means they are non-ferromagnetic. However, if the crystal structure of an austenitic stainless steel is changed through work-hardening or special thermal treatment, then ferrite can form in some locations making the steel partially magnetic.
