The global Non-metal Shot Peening Shot market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Non-metallic shot peening abrasives refer to a type of shot peening media that does not contain metal elements, mainly composed of non-metallic components such as minerals, synthetic materials or organic substances. During the shot peening process, these non-metallic shot materials are sprayed onto the surface of the workpiece at high speed, and through impact and friction, the purpose of cleaning, strengthening or changing the surface properties of the workpiece is achieved. Unlike metal projectiles (such as cast steel shot, cast iron shot, etc.), non-metallic shot peening shot does not contain metal elements, so it has some unique physical and chemical properties. Non-metallic shot peening shot is widely used in aerospace, automobile, shipbuilding, casting, bridge, construction and other fields. For example, in the aerospace field, non-metallic shot peening shot is used to improve the surface quality and performance of aircraft; in the automotive manufacturing industry, it is used for cleaning and surface treatment of automotive parts before painting.

With the rapid development of the manufacturing industry, especially the continuous expansion of high-end manufacturing fields such as aerospace, automobiles, and shipbuilding, the non-metallic shot peening abrasives market has also shown a steady growth trend. Non-metallic shot peening abrasives are widely used in aerospace, automobiles, shipbuilding, casting, bridges, construction and other fields. In the aerospace field, it is mainly used to improve the surface quality and performance of aircraft; in the automotive manufacturing industry, it is used for cleaning and surface treatment of automotive parts before painting to improve the wear resistance, fatigue

resistance and corrosion resistance of parts. Non-metallic shot peening abrasives have some unique advantages over traditional metal abrasives, such as lighter weight, lower noise, and less pollution. These advantages make non-metallic shot peening abrasives more competitive in certain specific applications. In summary, the non-metallic shot peening abrasives market is in a stage of steady development and has broad market prospects and development potential.
