The global Non-Metallic Cord Grips market size is predicted to grow from US\$ 1097 million in 2025 to US\$ 1627 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Non-metallic cord grips are cable connectors made from materials such as nylon or polypropylene, designed to securely fasten and seal cables where they enter enclosures or equipment. They offer excellent resistance to water, dust, corrosion, and electrical conductivity, making them ideal for use in harsh or corrosive environments. These grips provide reliable strain relief and environmental protection for electrical and control systems. In 2024, the global production of non-metallic cord grips was approximately 1.62 billion units, with an average price of USD 0.65 per unit.

Driven by trends in industrial automation, smart factories, and renewable energy infrastructure, the demand for lightweight, corrosion-resistant, and electrically insulating cable management solutions is increasing. Non-metallic cord grips, especially those made from high-performance nylon, are gradually replacing some traditional metal counterparts. Future development will emphasize eco-friendly materials (e.g., recyclable polyamides), higher ingress protection ratings (IP67 and above), and superior durability in harsh environments such as high temperatures and coastal areas. Global players like Amphenol, Emerson, and ABB are advancing their non-metallic offerings to meet stringent international standards and expanding into solar, energy storage, and EV charging infrastructure. Meanwhile, domestic Chinese firms such as Beisit Electric Tech, China Super Holdings, and Shanghai Wenyi Electric are gaining ground through localized material supply chains, cost competitiveness, and export-driven growth strategies.
