The global Non-Metallic Gasket Sheet market size is predicted to grow from US\$ 4180 million in 2025 to US\$ 5421 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

Non-metallic gasket sheets are widely used in sealing applications across a variety of industries, such as automotive, oil and gas, chemical processing, and power generation. These gasket materials are made from various non-metallic substances and are designed to prevent leaks in flanged joints, pipes, tanks, and other equipment. Non-metallic gasket sheets typically offer more flexibility compared to metal gaskets, allowing them to conform to irregularities in the sealing surface. Many non-metallic gaskets (especially PTFE, graphite, and rubber-based materials) are highly resistant to chemical attack, making them suitable for corrosive environments.

Global Non-Metallic Gasket Sheet key players include The Flexitallic, Freudenberg Sealing Technologies, Trelleborg, ElringKlinger, EnPro Industries, etc. Europe is the largest market, with a share about 30%, followed by China and North America, both with a share over 20 percent.

Non-metallic sealing gaskets are widely used in flange connections, pipe joints, etc. in petrochemical equipment to prevent leakage. Common materials include polytetrafluoroethylene (PTFE), graphite, etc. With the increase in global demand for energy and chemicals, the continued growth of the petrochemical industry will drive the demand for high-quality sealing gaskets. Especially with increasingly stringent environmental regulations, high-performance, low-leakage sealing gaskets will be more

popular.

In power facilities such as power plants and nuclear power plants, non-metallic sealing gaskets are used to seal various pipes, valves and heat exchangers. Common materials include PTFE, graphite composite materials, etc. With the development of renewable energy and the upgrading and transformation of traditional energy facilities, the demand for reliable and efficient sealing gaskets in the power industry will continue to grow. In particular, the extremely high safety requirements of nuclear power plants will further promote the market demand for high-end sealing gaskets.

Non-metallic sealing gaskets are widely used in many industries, and with the increasing demand for high-performance and high-reliability sealing products in various industries, their market prospects are very broad. In the future, the continuous advancement of new materials and new technologies will further promote the development of the non-metallic sealing gasket market.
