The research report highlights the growth potential of the global Non-migratory Antistatic Agent market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Non-migratory Antistatic Agent are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Non-migratory Antistatic Agent. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Non-migratory Antistatic Agent market.

Non-migratory antistatic agent form a percolating network similar to conductive carbon black, and therefore fairly high loadings of these nontraditional antistats are required to ensure good antistatic properties in polyolefin films. The function of certain non-migratory antistats is humidity independent.

Non-migrating additives do not move or migrate through or out of the polymer. They work by using a co-continuous ion conductive polymer phase. Ions acting as charge carriers within the additive will dissipate the static field.
