With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Non-Oxidizing Biocides for RO Membranes is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Non-Oxidizing Biocides for RO Membranes market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Non-Oxidizing Biocides for RO Membranes are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Non-Oxidizing Biocides for RO Membranes. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Non-Oxidizing Biocides for RO Membranes market.

Non-oxidizing biocides (NOBs) are compounds that act against bacteria through several mechanisms: preventing duplication, stopping cellular processes and metabolic reactions or destroying the cell wall. The biocidal action is carried out through specific mechanisms that make NOBs characterized by a major tendency to induce resistance phenomenon. Non-oxidizing biocides do not act through redox reaction and, in general, they are less reactive than OBs - indeed, the time required to fully eliminate bacteria is longer (from several hours to one day). Being less reactive, NOBs can be stored for a very long period and they are less corrosive against materials. Another advantage of

non-oxidizing biocides is the great stability in solution - they have low sensitivity to variations in pH and temperature, a prolonged effect and the biocidal activity is easy to control.
