Plasticizers are the chemicals added to polymers to soften the hard and brittle plastic to flexible and soft material thereby improving the toughness of the material. PVC accounts for more than 80% of the overall plasticizers consumption. Traditionally, the phthalate plasticizers were the most commonly used plasticizers across a number of applications but owing to the human health risks and environmental concerns regarding the toxic substances present in such plasticizers, the use of non-phthalate plasticizers is projected to grow significantly. The non-phthalate plasticizers are mainly used for sensitive applications such as food contact, medial and toys primarily and things that involve close human contact majorly toys and childcare applications. Non-phthalate plasticizers are effective alternative to the traditional/conventional plasticizers which are toxic in nature and are harmful for direct human contact.

The global non phthalate plasticizers is dominated by Asia Pacific region. The region has seen an increase in demand for non-phthalate plasticizer owing to the rapid growth of construction industry in the region. Moreover, other end use industries are also anticipated to have positive impact on the Asia Pacific non phthalate plasticizer market. North America and Europe are also anticipated to show significant demand for non-phthalate plasticizer owing to the stringent regulations prohibiting the use of traditional

phthalate plasticizers. Regions such as Latin America and Middle East and Africa have shown a moderate demand for non-phthalate plasticizers as compared to other regions. Japan is also projected to remain a lucrative region for the growth of non-phthalate plasticizers.
