Air handling unit (AHU) is a central air conditioning unit that handles the air circulating within the entire HVAC system.

The HVAC equipment market, including air handling units, is highly dependent on the construction industry, government regulations, and new initiatives by various regional governments to promote infrastructure and industrial and manufacturing development. Any fluctuations in the growth of the commercial and industrial sectors are bound to have a direct impact on the demand for HVAC equipment. The pandemic has highlighted the importance of ventilation, which is a significant factor driving demand for air handling units. Multiple studies have shown that COVID-19 transmission is particularly effective in crowded, confined indoor spaces such as workplaces (offices, factories) and other indoor settings such as churches, restaurants, shopping malls, and vehicles. Outdoor air ventilation is believed to dilute contaminants in enclosed spaces and increase the time required for exposure to infectious doses, which is aiding the growth of the market.
